

FMSAC Dealings with Non-DIA/DOD Groups

Routine technical interchanges on a daily basis are held at the National Security Agency and the joint NSA/DIA group at Fort Meade, DEFSMAC. Additionally, FMSAC maintains analytical discussions in the technical areas with the following non-DIA organizations:

FTD, WPAFB -- Good in-depth exchanges in telemetry, optical, radar and photographic data base areas. The areas of interest are related to strategic weapons and space systems and facilities analysis.

Missile Intelligence Agency (MIA), Huntsville -- There are some telemetry analysis discussions with MIA but the Agency association is largely in the OSI arena as MIA is almost exclusively involved in defensive weapons systems analysis.

NAVSTIC -- Good analytical exchanges are maintained relative to Naval ballistic missile systems. Technical collection support to the Navy also involves good exchanges at the analyst level.

Telemetry and Beacon Analysis Committee (TEBAC) -- Even though TEBAC is an informal community activity, it has proved to be a strong and active forum for technical exchanges across the entire weapons and space systems areas. The analytical strength supporting TEBAC lies in NSA, FTD, MIA and CIA.
